

ANDREI BAUTIN

Senior Software Engineer · .NET · Azure · React

Denver, CO | andreibautin94@gmail.com | (913) 827-6855 | LinkedIn | GitHub

SUMMARY

Senior Software Engineer with 7+ years building cloud-native enterprise applications in C#, .NET, React, and Azure. Recent work includes an Azure OpenAI RAG platform for engineering documentation and asynchronous Service Bus data replication. Owned the architecture in development, QA, and production environments, and mentored engineers through delivery.

TECHNICAL SKILLS

Languages	C#, TypeScript, JavaScript, SQL
Frameworks	.NET / ASP.NET Core, Entity Framework Core, React, Next.js, Vue.js, Blazor, REST APIs
Cloud & DevOps	Azure, Azure OpenAI, Azure AI Search, Functions, App Service, Service Bus, Blob Storage, Key Vault, Application Insights, Azure DevOps, GitHub Actions, Docker, CI/CD
Data	SQL Server, PostgreSQL, MySQL, Cosmos DB
Practices	System design, application architecture, modernization, RAG / retrieval systems, observability, agile delivery, technical mentorship

PROFESSIONAL EXPERIENCE

3Cloud, a Cognizant Company (formerly Brainspire Solutions)

Denver, CO

Senior Software Engineer

September 2024 to Present

- Inherited a delayed Azure RAG platform, stabilized the architecture, and led it to a production-ready release used to query engineering documentation in natural language.
- Designed the knowledge assistant end to end with Azure OpenAI, Azure AI Search, Blob Storage, React/TypeScript, and .NET; owned architecture across development, QA, and production with stakeholders and infrastructure.
- Added Application Insights, alerts, and traces while building the RAG platform, then used that telemetry to diagnose issues through stabilization.
- Replaced a serialized data-replication path with an asynchronous Azure Service Bus design that improved throughput, then used Insights and alerting to prove every message replicated without loss.
- Delivered features and production fixes on enterprise tax and audit applications while improving reliability in an agile environment.
- Mentored and onboarded 5+ engineers through code reviews, architecture guidance, and shared standards; contributed to team technical decisions.

Software Engineer

June 2019 to September 2024

- Built custom web applications and Azure cloud solutions across healthcare, insurance, retail, and industrial clients using .NET, Vue.js, React, and SQL Server.
- Automated payment-processing workflows that eliminated more than 11 hours of manual work each day.
- Modernized legacy applications with new features, maintainability work, and UI improvements; shipped internal tools that streamlined task management and operations.
- Worked the full lifecycle from requirements and architecture through implementation, deployment, and production support.

EDUCATION & CERTIFICATIONS

Colorado State University

B.S., Applied Computing Technology
Fort Collins, CO · May 2019

Microsoft Certifications

Azure Fundamentals (AZ-900)
Azure AI Fundamentals (AI-900)
