SUMMARY

Senior software engineer with 7+ years building enterprise applications in C#, .NET, React, and Azure. Owns architecture and delivery across development, QA, and production, with experience in retrieval-augmented generation (RAG), asynchronous messaging, observability, and technical mentorship.

PROFESSIONAL EXPERIENCE

3Cloud, a Cognizant Company (formerly Brainspire Solutions) | Denver, CO

Senior Software Engineer | September 2024 - Present

- Inherited a delayed Azure RAG platform, stabilized its architecture, and led it to a production-ready release for natural-language queries over engineering documentation.
- Designed the knowledge assistant with Azure OpenAI, Azure AI Search, Blob Storage, React/TypeScript, and .NET. Owned architecture across development, QA, and production; added Application Insights, alerts, and traces to diagnose stabilization issues.
- Replaced serialized data replication with an asynchronous Azure Service Bus design to improve throughput, using telemetry and alerts to monitor replication completeness.
- Delivered features and production fixes for enterprise tax and audit applications. Mentored and onboarded 5+ engineers through code reviews, architecture guidance, and shared standards.

Software Engineer | June 2019 - September 2024

- Built .NET, Vue.js, React, SQL Server, and Azure solutions across healthcare, insurance, retail, and industrial clients, from requirements and architecture through deployment and production support.
- Automated payment-processing workflows that eliminated more than 11 hours of manual work per day; modernized legacy applications and delivered internal tools for task management and operations.

SELECTED PROJECTS

DJ Visualizer Generator | .NET, React, TypeScript, FFmpeg | Live demo

- Built an asynchronous audio-to-video pipeline that encodes one animation cycle and reuses it. Includes a bounded file-backed job queue, upload validation, expiring downloads, and real FFmpeg tests.

LiftOS | React, TypeScript, IndexedDB, PWA | Live demo

- Built an offline-first workout tracker that derives its training plan instead of storing it and applies double progression from logged history, with lint-enforced architecture boundaries. Public demo uses generated data.

TECHNICAL SKILLS

Languages & frameworks: C#, TypeScript, JavaScript, SQL, ASP.NET Core, Entity Framework Core, React, Next.js, Vue.js, Blazor

Cloud & delivery: Azure OpenAI, AI Search, Service Bus, Functions, App Service, Blob Storage, Key Vault, Application Insights, Azure DevOps, GitHub Actions, Docker, CI/CD

Data: SQL Server, PostgreSQL, MySQL, Cosmos DB

EDUCATION & CERTIFICATIONS

Colorado State University | B.S., Applied Computing Technology | May 2019

Microsoft: Azure Fundamentals (AZ-900) | Azure AI Fundamentals (AI-900)
